

PRODUCT OVERVIEW

What the platform does, and produces.

A reader's tour of the four pathways, the assessment architecture, and the outputs each audience receives at the end of the engagement.

What the platform

01 · WHAT IT IS

A communication intelligence layer.

Silk Clarity is an evidence platform that produces structured, observable assessments of communication behaviour against a six-dimension framework. The output is a Communication Signature per individual, plus comparison views across cohorts or shortlists.

02 · PATHWAYS

One engine, four audiences.

- Individual — professionals preparing for senior conversations.
- Executive Search — defensible communication evidence for shortlist work.
- Enterprise — longitudinal capability tracking across leadership populations.
- Academic — methodology validation and research partnerships.

03 · ARCHITECTURE

Five evidence streams.

Streams are weighted, calibrated, and reconciled. Discrepancy across streams is preserved as a signal — never averaged away.

- Behavioural Communication Baseline.
- Self-Report Assessment.
- Structured Behavioural Assessment.
- Practitioner Evidence (optional).
- Development Evidence (longitudinal).

What the platform

04 · OUTPUTS

What each audience receives.

- Communication Signature report — PDF and in-platform.
- Shortlist comparison view — Search and Enterprise.
- Development roadmap — Individual and Enterprise.
- Evidence library — observable behaviour with assessment commentary.

05 · POSTURE

What the platform is not.

Silk Clarity does not predict performance, infer personality, or make hire recommendations. It produces evidence; the decision remains with the human.

POSTURE

Evidence supports judgement — it does not replace it. The platform never claims otherwise.
